

## PRICE LIST

### SKIN TIGHTENING

NIR infrared for skin tightening, body contouring, anti-ageing, lines and wrinkles. Near Infrared Technology (NIR) is a safe light that heats the tissue under the skin's surface to tighten skin laxity and improve skin architecture. NIR stimulates the infiltration of fibroblast and the formation of new collagen, enhancing the tightening effect, and helping to bolster the skin against future ageing. The presence of healthy collagen in the dermis helps maintain the skin's youthful resiliency and texture.

This treatment is used for the temporary relief of minor muscle pain, inflammation, joint pain and stiffness associated with arthritis muscle spasms, tendinitis and relaxing minor sprains and strains. Highly effective for increasing blood circulation and removing toxins from the body.

IN-Motion™ Technology ensures that the procedure is virtually painless for the patient.

#### FACE
